

Cleaning Windscreens & Windows

Instructions

Visual Instructions

1

Windscreen and other windows should first be blown off with clean shop air prior to applying any cleaning solution. This will remove the majority of the dust.

2

Next the windscreen and other windows should be sprayed with clean water and allowed to run down the surface of the glass. This should remove all other dust and debris prior to wiping.

3

A chamois should be the only cloth used for cleaning. Do not use shop rags, paper towels, or Kim wipes. Ensure chamois used in cleaning is free of dirt, body filler, etc... These could cause scratches during cleaning.

4

Windows shall be wiped in the direction of the airflow only. This will prevent streaking.

5

Once water wash is complete an approved solvent and rag may be used for cleaning. Prist® Acrylic Plastic and Glass Cleaner, Miller's Glass Cleaner, and Multi - Shine, along with a chamois are all approved cleaners.
